RE:

Request for Determination - Supplemental Information

Elim Park Place - Campus Generator Project

LRC Project No. 21-2741

Dear Commissioners.

In regards to our Request for Determination that was considered at your July 20, 2021 meeting, we are pleased to provide you with some supplemental information in regards to the generator proposed for the NE corner of the site (near Spring Meadow building and the community gardens). At that meeting, the Commission expressed an interest in a provision for spill containment during tank filling procedures.

After digging into the particulars of the diesel fuel tank for this generator, we found that the tank has an option of including an integrated spill/fill box around the fuel fill fitting. Please see the attached manufacturer's drawing for this tank and the highlighted areas showing this spill box. Specifying the tank with feature would be our preference for addressing the IWW Commission's concerns.

However, should that feature not be sufficient to address your concerns, we can offer provision of a curbed pad such as the one shown on second detail attached, SK-A4, which would provide a spill capacity of approximately 270 gallons. If curbed, the pad detail would be further amended to provide an outlet for rainwater that can be closed during refilling procedures.

We anticipate discussing this with you at your August 3rd meeting and look forward to answering any questions that you may have.

Thank you for your consideration.

Sincerely,

LRC Engineering & Surveying, DPC
